The Edison Chamber of Commerce, an advocate for the Edison, New Jersey, business community, generally opposes all new and increased taxes placed on the business community.

The Edison Chamber of Commerce supports a tax system that is simple, transparent, stable and promotes pro-growth business activity. Small business is the growth engine and major job creation sector of the economy. The Chamber understands that business taxes affect business decisions, job creation and retention, site location, competitiveness and long term health of New Jersey's economy. As such, lower taxes on business will be more attractive to business investment and more likely to spur economic growth.

Therefore for the reasons stated, the Edison Chamber of Commerce will generally oppose all new and increased taxes directed at the business community and supports a tax system that creates economic growth.
